

# XpGenerator™

*Automated PDF generation of your Adobe AEM web site content for compliance*

## THE CHALLENGE

Keeping web site “content” backed up in PDF format is a general practice in most regulated industries such as Financial Services, Insurance, and Utilities. This is typically performed manually via in-house resources or external contractors, the cost of which is generally very high. This is an inefficient process which takes a tremendous amount of time and staff to process manually, and is inherently error-prone. We have a solution with a high ROI that can automatically perform these backups ensuring completeness and timeliness.

## THE SOLUTION

### Functional

Set up automated processes so these backups are done without intervention.

- Set up a cover page for each backup.
- Perform full or incremental backups.
- Add notes to pages as required.

### Storage

Save the generated PDFs to any location of your choice.

- Hard drive
- Cloud storage solution
- Even your DAM

### Technical

Deployed into your Adobe AEM author instance as an OSGI bundle.

- Deployed in days, not weeks.
- *Simple, effective, and cost effective.*

## RAPID TIME TO VALUE

- The software is licensed as an annual subscription that includes the license, upgrades, and support.
- The solution is installed as an OSGI bundle into your AEM Author instance.
- Your integrated ecosystem can be up and running in 4 to 8 weeks adding value to your enterprise.

## WHAT IF YOU COULD

1. Reduce your time to create by 92% to 98%.
2. Reduce your cost to create by 70% to 90%.
3. Reduce compliance risk.

*Let's set up a 30 minute intro and demo*

# Xpediant Digital Introduction

**Xpediant Digital** is a dynamic, leading-edge product and services firm committed to optimizing the end-to-end lifecycle of the digit asset ecosystem. Our focus is in the Pharmaceutical, Life Sciences, and Financial Services industries. We specialize in transforming the digital asset supply chain between Adobe AEM and Veeva Vault through integration and automation. Our XpConnect® platform and our XpGenerator™ and XpOmniChannel™ framework solutions are designed to integrate and automate the digital asset ecosystem between Adobe AEM, Veeva Vault, and Veeva CRM, automating and streamlining processes while enabling authoring efficiencies and driving improved speed to market and cost savings. Our XpGenerator™ framework solution not only solves the medical and legal review packaging challenge in the Pharmaceutical and Life Sciences sectors, but also solves the AEM website back-up to PDF for other regulated industries. Same problem. Different industry. Same solution.

**Xpediant Digital** is a full service supplier, offering professional services for customization, installation, development, and support. We are a best in class Adobe AEM solutions provider.

**XpConnect®** is the only Veeva certified and Adobe approved bi-directional integration and automation platform for Adobe AEM and Veeva Vault. The XpConnect® platform provides integrated authoring and compliance and access to approved digital assets across DAM platforms, with the user experience designed as an extension to the AEM user experience. It also manages the expired assets and syncing of metadata between Adobe AEM and Veeva Vault, while maintaining a single source of truth. It provides a seamless solution placing the author at the center of the end-to-end process driving both cost savings and improved speed to market.

**XpGenerator™ PHARMA** was developed for the Pharmaceutical, Life Sciences, and Medical Devices industries to PDF content that has to be packed for medial and legal review approval. This innovative product can PDF an asset, page, multiple pages, or the entire site with cover page and the ability to comment.

**XpGenerator™ FINANCE** enables significant time and cost savings for any regulated industry that must provide websites in PDF format to regulatory or approval boards. The return on investment of this product can be in weeks when comparing the value against the cost of creating the PDF files manually.

**XpOmniChannel™** provides a “starter kit” of templates and modular content components that are customized for each client and enables the usage of Adobe AEM to author all channels, *i.e.*, website, IVA / ISA, and representative triggered emails. This framework makes it easy to curate assets for one channel or all channels using a single platform.
